RTV FACTORY COATED TOUGHENED GLASS INSULATOR FOR POLLUTED ENVIRONMENTS

- N. 💊	

RTV silicone coating

- Hydrophobic, water-repellent properties that improve insulator performance under pollution.
- **No need** to wash insulators regularly.
- Reduced risk of flashover due to pollution.
- Fully coated insulators generally necessary for insulator strings in very heavy pollution environments, under coated insulators in medium and heavy pollution areas.

HIGH) High quality toughened glass

- A Sediver® glass insulator lifetime equal to or greater than that of conductors, hardware and structures.
- Binary behaviour: infallible visual inspection, no risk of installing a damaged unit.
- High residual mechanical strength: no urgent need to replace an insulator that has a broken glass shell.
- Safe live-line maintenance operations.

Factory controlled application process

- Incoming inspection and material testing in our chemistry laboratory to verify the consistency and quality of the RTV silicone coating prior to processing.
- Before application of the silicone coating, special cleaning and preparation of the dielectric shell surface to ensure perfect bonding.
- Coating applied using a fully automated factory process to ensure a stable high quality coating application in terms of the thickness, homogeneity, bonding and visual appearance of finished products.
- Controlled environmental conditions (humidity and temperature) to ensure optimum curing.
- Sample testing of each batch to verify compliance with Sediver acceptance criteria for visual appearance, bonding, thickness and hydrophobicity.
- Factory coating process to reduce silicone loss and prevent release into the environment.
- Customised Sediver packing system and guidance for handling and assembly to avoid damaging the silicone.

SEDIVER

Sediver field experience

- Over 25 years of field experience and proven performance.
- Over 4.5 million insulators in service.
